Map Enumeration

A Problem-Solving Exposition

Conventions

- All the graphs we consider can have loops and multiple edges.
- Unless otherwise stated, our graphs are connected.

Definition 0.1 (Half-Edge [1])**.** We can think of an edge as a pair of half-edges, matched together. This helps to avoid some difficulties dealing with multiple edges and loops.

Definition 0.2 (Corner [2])**.** A corner is the angular sector delimited by two consecutive edges around a vertex.

::: {#def-degree of a vertex}

Degree of a Vertex

The degree of a vertex v in a graph G is the number of half-edges incident to v.

:::

Definition 0.3.
